Vsebina: Predmet je posvečen matematičnemu pristopu pri študiju in razumevanju velikih omrežij. Sestavljen je iz več delov: I. Osnovno o grafih: osnovne grafovske invariante, usmerjeni grafi, spekter grafa, verjetnostna metoda. Grafovski algoritmi. II. Splošno o omrežjih: socialna omrežja, računalniška omrežja, biološka omrežja, analiza omrežja. III. Mere središčnosti: stopnja točke, središčnost Estrade, bližinska središčnost, ekscentričnost, grafleti, središčnost lastnega vektorja, Katzova središčnost, Vmesnostna središčnost in njene različice.	Content (Syllabus outline): The course is dedicated to mathematical approach to the study and understanding of large networks. It is comprised of several parts: I. Graph basics: basic graph invariants, directed graphs, graph spectra, probabilistic method. Graph algorithms. II. General about networks: social networks, computer networks, biological networks, network analysis. III. Centrality measures: vertex degree, Estrada centrality, closeness centrality, eccentricity, graphlets, eigenvalue centrality, Katz centrality. Betweenness

Cilji in kompetence:

Učna enota prispeva k razvoju naslednjih splošnih in predmetno-specifičnih kompetenc:

- sposobnost identificiranja danega raziskovalnega problema, njegove analize ter možnih rešitev
- ustvarjanje novega znanja, ki pomeni relevanten prispevek k razvoju znanosti
- sposobnost obvladanja standardnih metod, postopkov in procesov raziskovalnega dela na različnih znanstvenih področjih
- sposobnost za reševanje konkretnih raziskovalnih problemov na posameznih področjih družbenih in ostalih ved
- razvoj veščin in spretnosti v uporabi znanja na raziskovalnem področju doktorske disertacije
- sposobnost inovativne uporabe in

Objectives and competences:

Learning unit contributes to the development of the following general and subject-specific competences:

- the ability to identify, analyze and construct solution for a given research problem
- the creation of new knowledge and contribution to the development of science
- mastery of standard methods, approaches and processes of scientific research in various scientific fields
- skills and abilities for solving concrete research problems in various fields of social and other sciences
- development of skills and abilities in usage of knowledge in doctoral research
- ability of innovative combined usage of various research methodologies

kombiniranja raznih raziskovalnih metod

Predvideni študijski rezultati:

Znanje in razumevanje:

Študent/študentka:

- se seznanji s teoretskimi osnovami in s praktičnimi vidiki sodobne teorije omrežij,
- se seznanji z algoritmi za modeliranje velikih socialnih in informacijskih omrežij, predvsem v kontekstu uporabe v realističnih primerih,
- se seznanji z metodami teoretičnega računalništva in analize ter načrtovanja algoritmov na primeru velikih omrežij,
- se seznanji z metodami statistične fizike v kontekstu teorije omrežij,
- spozna računsko zahtevne metode za analizo malih omrežij, ter hitrejše metode za analizo večjih omrežij.

Intended learning outcomes:

Knowledge and understanding:

The student:

- becomes familiar with theoretical basics and with practical perspectives of modern network analysis,
- learns methods and algorithms for analysis and modeling of large social and information networks, and learns how to use the existing tools and software packages,
- is informed with theoretical bases and practical views of statistical methods in the field of large network analysis,
- is informed with methods of theoretical and statistical physics in the context of large networks,
- is informed with algorithms and methods appropriate for analysis of small vs large networks.

Metode poučevanja in učenja:

- Predavanja z aktivno udeležbo študentov (razlaga, diskusija, vprašanja, primeri, reševanje problemov).
- Vaje (praktično izvajanje predstavljenih metod, reševanje nalog).
- Individualno delo študentov (samostojen študij literature, izdelava seminarske naloge in njena ustna predstavitev, programiranje).

Learning and teaching methods:

- Lectures with active participation of students (explanation, discussion, questions, examples, problem solving).
- Exercises (practical implementation of the presented methods, problem solving).
- Individual work of students (study of literature, seminar work and its oral presentation, programming).

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
<p>Način (pisni izpit, ustno izpraševanje, naloge, projekt):</p> <ul style="list-style-type: none"> • Seminarska naloga • Domače naloge • Ustni izpit 	33 33 34	Type (examination, oral, coursework, project): <ul style="list-style-type: none"> • Seminar • Homework • Oral exam
