

UČNI NAČRT PREDMETA / COURSE SYLLABUS						
Predmet: Course title:	Analiza kategorialnih podatkov Categorical data analysis					
Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester			
Podatkovne znanosti, magistrski študijski program druge stopnje	-	Prvi	Drugi			
The second cycle masters study programme Data Sciences	-	First	Second			
Vrsta predmeta / Course type	Obvezni / Obligatory					
Univerzitetna koda predmeta / University course code:	2-PZ-MAG-AKP-2020-06-30					
Predavanja Lectures	Seminar Seminar	Vaje Tutorial	Klinične vaje work	Druge oblike študija	Samost. delo Individ. work	ECTS
30	-	30	-	-	90	5
Nosilec predmeta / Lecturer:	Doc. dr. Nuša Erman					
Jeziki / Languages:	Predavanja / Lectures: Slovenski, angleški / Slovene, English					
	Vaje / Tutorial: Slovenski, angleški / Slovene, English					
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisits:					
Pogoj za vključitev v delo je absolvirano znanje pri predmetu Izbrana poglavja iz verjetnosti in statistike.	Knowledge obtained at Selected topics in probability and statistics is required.					
Pogoj za pristop k pisnemu izpitu je pravočasna oddaja in pozitivno ocenjena seminarska naloga.	Student has to submit seminar work within the due time. If the seminar work is positively graded, he/she is allowed to write the exam.					
Vsebina:	Content (Syllabus outline):					

- | | |
|---|--|
| <ul style="list-style-type: none"> • Uvod v analizo kategorialnih podatkov: kategorialni podatki, verjetnostne porazdelitve kategorialnih podatkov, inferenčna statistika diskretnih podatkov. • Kontingenčne tabele: verjetnostna struktura kontingenčnih tabel, primerjava deležev v 2×2 tabelah, testi neodvisnosti, natančno (eksaktno) sklepanje, razširitev na tri- in več-dimenzionalne tabele. • Razmerja obetov v 2×2 in $I \times J$ tabelah • Analiza 2^K tabel • Loglinearni modeli: definicija, interpretacija, ocenjevanje. • Enostavna korespondenčna analiza. • Multipla korespondenčna analiza. | <ul style="list-style-type: none"> • Introduction to categorical data analysis: categorical data, probability distributions for categorical data, statistical inference for discrete data. • Contingency tables: probability structure for contingency tables, comparing proportions with 2×2 tables, tests for independence, exact inference, extension to three-way and multi-dimensional tables. • Odds ratios in 2×2 and $I \times J$ tables. • Analysis of 2^K tables. • Loglinear models: definition, interpretation, estimation. • Simple correspondence analysis. • Multiple correspondence analysis. |

- Erman, N.: Analiza kategorialnih podatkov – prosojnice s predavanj in gradiva iz vaj, FIŠ, Moodle.

Cilji in kompetence:

Učna enota prispeva k razvoju naslednjih splošnih in predmetno specifičnih kompetenc:

Splošne kompetence:

- Sposobnost skrbeti za kakovost strokovnega dela skozi avtonomnost, samoiniciativnost, (samo)kritičnost, (samo)refleksivnost in (samo)evalviranje.
- Sposobnost interpretacije rezultatov podatkovne analize.
- Sposobnost analitičnega in algoritičnega razmišljanja.
- Zmožnost artikulacije raziskovalnega problema in na tej podlagi sposobnost pridobivanja, selekcije, ocenjevanja in umeščanja novih informacij.

Objectives and competences:

The instructional unit contributes to the development of the following general and subject-specific competences:

General competences:

- The ability to manage quality of professional work through autonomy, initiative, as well as (self-)criticism, (self-)reflection and (self-)evaluation.
- The ability to interpret the results of data analysis.
- The ability of analytical and algorithmic thinking.
- The ability to articulate the research problem and correspondingly, obtain, select, evaluate and embed the new information.
- The ability of flexible usage of knowledge in practice.

- Sposobnost fleksibilne uporabe znanja v praksi.

Predmetno-specifične kompetence:

- obvladanje raziskovalnih metod, postopkov in procesov
- poznavanje osnovnih in zahtevnih metod analize kategorialnih podatkov

Subject-specific competences:

- competence in research methods, procedures and processes
- familiarity with basic and advanced methods for categorical data analysis

Predvideni študijski rezultati:

Znanje in razumevanje:

Sposobnost študenta/študentke bo:

- poznavanje osnovnih in zahtevnejših pristopov k analizi kategorialnih podatkov;
- poznavanje in kritično vrednotenje ustreznosti uporabljenih metod za reševanje praktičnih problemov v analizi kategorialnih podatkov;
- poznavanje oblikovanja ustreznih vsebinskih interpretacij rezultatov.

Intended learning outcomes:

Knowledge and understanding:

The ability of the student:

- knowledge of basic and advanced approaches to categorical data analysis;
- knowledge and critical evaluation of the appropriateness of the methods used to solve practical problems in the categorical data analysis;
- knowledge to draw relevant content interpretation of the results.

Metode poučevanja in učenja:

- predavanja z aktivno udeležbo študentov (razлага, diskusija, vprašanja, primeri, reševanje problemov)
- vaje, kjer študentje na enostavnih primerih ponovijo temeljne koncepte in metode, predstavljene na predavanjih
- laboratorijske vaje, kjer se študenti seznanijo s programskimi orodji za zbiranje in analiziranje podatkov .

Learning and teaching methods:

- lectures with active students participation (explanations, discussion, questions, examples, problem solving);
- tutorials (students will recall, reinforce, and shed light on the concepts and methods taught on lectures);
- lab work (students will learn state of the art software for data collection and analysis).

Delež (v %) /

Weight (in %) **Assessment:**

Način:		Type:
<ul style="list-style-type: none"> • pisni izpit • seminarska naloga 	60 40	<ul style="list-style-type: none"> • written exam • seminar work
